

April 4, 2006

Dear Distributor,

Enclosed is a copy of our latest Suspension and Steering supplement, BD102. You will find it to be a comprehensive addition to our list of catalogs.

Some of the features of the Automann Catalogs are:

- Exploded views of components with dimensions, complete interchange (including OEM's), and complimentary parts and applications with reduced search time.
- Enlarged-views of kits and assemblies showing all components.
- User-friendly format with alphanumeric part listings including reference page numbers and complete interchange information by all makes and distributors.

Additionally, all items are labeled with OEM numbers and complete interchange information for easy identification.

The new catalog includes many dealer captive items that are now available from stock. We have focused on developing new items to keep up with the new engineering and technological advances in the industry.

We look forward to supporting your business with our expanded range of products and service.

Sincerely,

Dennis Singh
President
Automann USA Inc.
