HOW TO MEASURE EXTENDED & COLLAPSED LENGTHS OF SHOCK ABSORBERS

Instructions

1. Using the proper measuring points as shown above find the nearest replacement shock absorber from the listing increments of extended length.
2. Identify the proper mounting form the mounting codes and match these requirements by carefully measuring the mounting dimensions (top and bottom) of the shock absorber to be replaced.
3. Carefully take note of the following requirements:
 - a. **Mounting Accessories** - Contents and descriptions of parts are shown in this manual.
 - b. **Dust tubes** - This requirement should be noted in comparison with the shock absorber to be replaced. Shock absorber environment in its application makes this requirement necessary for piston rod protection and extended shock absorber life.
 - c. **Recoil Cutoff and Compression Bumper** - Carefully note these specifications- deviation of length requirements should not exceed $\pm 1/2$ ". These shock absorber designs are footnoted for easy identification.
 - d. **Limited Environment Application** - Most conventional shock absorbers are offered in "straight" construction to fit limited environment applications. These shock absorber designs are footnoted.

SHOCK ABSORBER DIAMETERS
